Verizon (various projects)  
**Remote Switching Unit & Central Office Facilities**

Telecommunications is an important aspect of TDM's core competencies. We have provided architectural and engineering support to Verizon for over ten years, working on a variety of projects mostly in California, but in Nevada and Arizona as well. Briefly the scope of work covered includes:

- New Remote Switching Units (RSU) – providing the necessary design and engineering for expanded telephone and digital service.
- Design and engineering of major expansions and minor upgrades at numerous Verizon Central Offices (C.O.) which included providing the expansion room for switch equipment, emergency generators, batteries, rectifiers, transformers and design of expanded or replaced mechanical equipment.
- Technical and research facilities are also an area of our expertise. These include the design of lab area such as metrology, conveying systems, warehousing, high density storage, and R & D facilities.
