West LA College: Aviation Technology Complex

TDM Architects, Inc. took over as project architect on the Aviation/ Aerospace Technology Complex. This \$9.3 million dollar complex includes two new high technology classroom buildings, aerospace testing laboratories, offices, associated site work and the relocation of the plant facilities building.

The project was an unusual combination of public and private sector partnering. Being close to several large airports, and aerospace centers, this center offered job training in aircraft mechanics, avionics, electronics and testing unequalled anywhere in Southern California. Construction was completed in September of 1997.

Client:
Los Angeles Community College District

Location:
Culver City, CA

Size:
74,7000 SF

Cost:
\$9,300,000

Completed:
September 1997
